

## East Tenne: Planting Flags

Admiral Hestorb has been busy exploring and charting all of the new lands found in the west of Schulmania. Her findings will revolutionize geography in Schulmania. She has planted the flag of Schulmania on several small and medium sized islands. And, perhaps, some large ones. Unless her theory is correct. In charting the coastline, she has come to a startling conclusion: Schulmanicus is surrounded on at least 3 sides by a continuous landmass. She believes that Tenne must be connected to Wirdleonia and then east and north to Devonshire. With this revelation, she is certain to ignite a firestorm of controversy with geographers. Let's track her progress.

She explored many islands in the western sea. On each, she planted the gray-black-white tricolor of Schulmania. Let's see where she has landed...

(These are your first glimpses of Tenne, by the way)

From her journeys, she and her team of cartographers were able to make a stunning observation – the coastline seems to run in a semicircle continuously around Schulmanicus. This would indicate that the World Ocean, which is fresh water, might not be an ocean after all. The gravity of this conclusion cannot be underestimated. Admiral Hestorb decided to have the cartographers rename the ocean on her new map. The new name may stick, or it may be rejected by the Supreme Wirdle. In the mean time, she now refers to the World Ocean as the Tenne Sea.
